Deployment Methodology:

Successfully deploy a dynamic authorization solution that grows with the specific needs of your business

Why a deployment methodology?

Axiomatics understands the challenges of introducing an authorization solution. The Axiomatics platform integrates with your existing infrastructure and application stack, simplifying your ability to infuse authorization within applications and reducing the complexity of authorization deployment tasks. We pioneered attribute-based access control (ABAC) more than 15 years ago and have helped organizations worldwide successfully roll out authorization initiatives to achieve their unique access management goals and requirements.

Too often, we see organizations try to implement an authorization strategy without knowing the mechanics of "how." Poor user alignment and engagement generates friction between stakeholders and increases the risk of getting stuck with limited usage adoption and siloed approaches to data security. Axiomatics has the experience and expertise that will help you through common deployment challenges and ensure your success.

KEY BENEFITS:

A wider outreach needs focus: A repeatable and automated approach is essential to ensure deployment across the organization instead of 'birthright' applications. To reach adoption, initiatives should be holistic in nature but implemented in focused phases.

Security matters: A deployment methodology helps build your organization's security culture and addresses key aspects of information management and control. It is integral to a successful data security compliance strategy.

Plan first to move quickly: Deeper integration leads to time savings and reduced costs.

Your blueprint for success

Regardless of the size of your business, Axiomatics follows a well-tested and repeatable approach to help customers deploy our platforms. Our deployment methodology is your blueprint for success. In as little as three to six months, we empower any organization to successfully deploy authorization solutions and future proof any access management strategy.

Axiomatics believes in partnering with our clients through their authorization implementation journey. Our professional services team works directly with you and your team through each step to help you plan, engage, implement and grow or evolve your authorization security strategy to meet your specific needs. For each deployment we follow a proven approach that reduces both adoption time and operational risk.

Plan first. Move quickly.

The key to a smooth transition lies in fast and thorough onboarding of all stakeholders - business, developers, security and compliance teams - and alignment on common goals. Communication and planning sessions help users ensure the project's internal readiness, establish why they are implementing a new solution, what security policies are in use and analyze the requirements and applications impacted.

Deploy with confidence

As you move into full deployment, Axiomatics leverages what we learn and agrees to design your wireframe. Policies are created to ensure authorization policy and data access reports are met, physical architecture is laid out to fit requirements and connectors are built for prioritized policy enforcement points. During this phase, users start configuring and testing policies into existing workflows to measure the impact on business workflow and overall adoption.
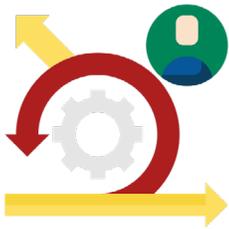

Experience speaks

Once rolled out, both users and IT admins continue to adapt processes to the new system, encourage feedback and report on key success factors and security policies. Axiomatics' professional services team will support your teams throughout this process and develop a better understanding of your future needs.

Building Success Together

Measure · Alignment · Deploy · Readiness · Testing · Analysis · Configure · Design

Methodical and flexible

While methodical, the Axiomatics approach evolves as we work with your team and understand industry needs and organizational framework. This means each process is unique and the timeline for sign off depends on various factors including company size, stakeholder involvement and approval process. The key to success is to educate the entire organization about the Axiomatics authorization platform and its benefits.

Professional services

Our professional services team recommends our Quick Start package designed to shorten your organization's ability to realize your investment value. This offering guides you through our proven deployment methodology, which details every stage from planning to successful deployment. This includes project management, hands-on support to oversee the successful deployment, product training, infrastructure design, as well as ABAC policy design and implementation. Axiomatics professional service consultants are globally distributed and can support you based on the offering that suits your needs the best. Our team offers numerous packaged offerings that meet a variety of needs you may experience beyond the initial deployment scope.

For more information on these programs or any specific questions you may have, please let us know. We are here to ensure your success.

About AXIOMATICS

Axiomatics is the originator and leading provider of runtime, fine-grained authorization delivered with attribute-based access control (ABAC) for applications, data, APIs and microservices. The company's Orchestrated Authorization strategy enables enterprises to effectively and efficiently connect Axiomatics' award-winning authorization platform to critical security implementations, such as Zero Trust or identity-first security. The world's largest enterprises and government agencies continually depend on Axiomatics' award-winning authorization platform to share sensitive, valuable and regulated digital assets — but only to authorized users and in the right context.
